

Guidelines to Authors

1. General information

Only original articles or practical case reports concerned with the entire field of implant dentistry and related or overlapping topics are considered for publication in the Zeitschrift für Zahnärztliche Implantologie (ZZI) on condition that they have not been published elsewhere. The editorial chairman reserves the right to edit the manuscript regarding stylistic changes and conciseness subject to the author's final approval on the galley proofs. The editorial chairman (board) will decide upon acceptance of the original manuscript after blind review. Every article will be reviewed by minimum two external reviewers according to a strictly scientific peer-review procedure following given assessment criteria. Case reports or matters of education related to the implant field will first be assessed exclusively by the editorial chairman with regard to their significance and information content for implant specialists. It may however be necessary to abridge or edit the manuscript prior to its acceptance for publication. Rejected manuscripts will be returned without any detailed comments. Unsolicited manuscripts will be returned only upon specific request. Parallel to the printing process, abstracts of the articles will be provided online for the purpose of literature search.

2. Registration

The Journal of Dental Implantology (ZZI) provides an online service at <http://wwwfv.editorialmanager.com/zzi/>, to enable web-based submissions. To submit a manuscript online you must, however, be fully registered beforehand in the Editorial Manager, the online service.

Therefore, please register before submitting the first manuscript in the attachment. If you have already been registered beforehand by the editors, the programme will prompt you to check your details and complete them, if necessary.

Please note that, where possible, a second email address (alternative contact details) should be provided and any longer periods of absence (unavailable times) reported!

3. Submission

3.1 Method

All manuscripts should be submitted online at: <http://wwwfv.editorialmanager.com/zzi/>.

If you have any questions, please contact the editors or the publisher:

Science:

Univ.-Prof. Dr. Dr. Bilal Al-Nawas
Universitätsmedizin der Johannes Gutenberg-Universität Mainz
Klinik für Mund-Kiefer-Gesichtschirurgie, Plastische Operationen
Augustusplatz 2, 55131 Mainz
Tel.: +49 (0) 6131 17-3752 / 3083
Fax: +49 (0) 6131 17-6602
bilal.al-nawas@unimedizin-mainz.de

Practice:

Prof. Dr. Kai-Hendrik Bormann
bormann@bormann-praxis.de
and
Dr. Peter Gehrke
dr-gehrke@prof-dhom.de

Editorial coordination:

Gabriele Schubert
schubert@aerzteverlag.de

Submitting online in Editorial Manager involves a sequence of several screen views and processing steps. Different particulars must be given depending on the submitting step and various components (manuscript, illustrations or similar) must be uploaded for submitting at the finish.

3.2 Components

The Journal for Dental implantology differentiates between different types of articles, e.g. "Case reports", "User expe-

riences from the practice *****", "Conference reports" or "Original works". These types of article differ with regard to the required steps for submitting or uploading attachments.

The following is a detailed description of the different submission components for the most frequent types of article, the original work.

4. Manuscript

4.1 File format

Please create your manuscript in the latest version of the text processing programme Microsoft Word for Windows or Mac.

Submission requires various information to be provided online about the manuscript prior to uploading the relevant file. The following text formats are compatible: Word, WordPerfect, RTE, TXT, LaTeX2e und AMSTeX.

If in addition to the manuscript your submission includes other components such as photographs, tables etc. please create separate files for these. A relevant description is provided below (Section 6–10).

4.2 Orthography

The latest, revised German orthographic rules are binding for articles submitted in German.

4.3 Abbreviations, foreign terms

Abbreviations should be avoided. Foreign, technical terms should only be used if there is no appropriate corresponding German word. The signs –[®]™ – for registered trademarks should only appear in tables.

4.4 Form and appearance

Manuscripts should be submitted without typing errors, ready-for-print, on DIN-A4-sheets, one-and-a-half-spaced, with a broad margin.

4.5 Mark ups

Singe words that have to be highlighted should be marked bold. Such mark ups should not be used too often in order to produce the intended effect. Entire sentences or passages will therefore not be highlighted.

4.6 Title

The title of the manuscript should be formulated briefly and descriptively and should not exceed 150 characters including spaces. The title should also be given in English (maximum 150 characters including spaces). In addition, the title should also be given online in Editorial Manager at the relevant processing step "Enter title".

4.7 Why you should read this article

In the case of any work with an unusual and not generally comprehensible subject matter it should be described in a short text, inserted in a box before the abstract, what significance the results have for clinical dentistry today or will possibly have in the future.

Each author will be asked to write a short text in German and English for this with the title "Why you should read this article" in which the author should briefly and concisely describe what scientific relevance and what relevance for daily practice the article has or could have in the future. Please limit this German and English text to a maximum of 200 characters including spaces. Editorial Manager includes the submission step "Short title" in which this text should be stored accordingly.

4.8 Summary

Every manuscript requires a summary, which informatively summarises the investigation methods and results.

This summary should be prefixed at the appropriate position in German and English and should consist of the following four subdivisions: Introduction, (material and) methods, results and conclusion. The German summary (maximum 3000 characters including spaces) should be separate from the English summary (maximum 3000 characters

including spaces) by a paragraph in the input field. Lower case applies for the English text apart from the first word and proper names.

4.9 Subheadings

The scientific article should be set up in a logical manner including sub-headlines. Each chapter should be divided using Arabic numbers. Do not use more than two digits.

4.10 Keywords

Furthermore, with every manuscript a maximum of eight keywords (in German and English), which indicate the content of the manuscript, should be given at the appropriate position. The German words should be given first (maximum 100 characters including spaces) and – separated by a paragraph – the English keywords (maximum 100 characters including spaces) in lower case. The keywords must be separated by a semi-colon.

4.11 Quotes

Authors' names should be written in italics in the manuscript. Only those names should be listed in the manuscript that are important for understanding the continuous text without disrupting the readability. Remaining quotes are given with square bracketed [reference numbers], which refer to the bibliography. The bibliography should be arranged alphabetically and then according to the year of publication and numbered consecutively. In general, an original work should not exceed approximately twenty quotes; these should be limited to the most important and latest work on the topic.

4.12 Footnotes

All additional indications concerning the author (e.g. his clinic), dedications, approvals of ethics or animal protection commissions (required for all respective studies) and sponsoring (mandatory for original articles) will be printed as footnotes.

4.13 Units of measurement

Authors are requested to use the numbers for measurements per internationally valid SI convention.

4.15 Components of case reports

Every case report requires a German and English summary, which informatively summarises the investigation method(s) and results.

This summary should be prefixed at the appropriate position in German and English and should consist of the following four subdivisions: Introduction, (materials)/ treatment methods, results and conclusion. The German summary (maximum 3000 characters including spaces) should be separate from the English summary (maximum 3000 characters including spaces) by a paragraph in the input field. Lower case applies for the English text apart from the first word and proper names.

The text component of the case report should consist of an introduction, which introduces the topic, a detailed presentation of the case including a description of treatment, a discussion, a conclusion and a bibliography (approx. 10–20 literature references). The main focus should be on a detailed presentation of the treatment methods and materials used. High-quality photographic documentation should usefully complement this component. Instructive schematic drawings are a desirable additional component.

5. Literature and Reference Style

5.1 General

The bibliography is a submission component that must be uploaded in addition to the manuscript when submitting online. The same guidelines apply for this attachment as for the manuscript with regard to file format, orthography, abbreviations or foreign words.

The bibliography should be arranged alphabetically and then according to the year of publication and numbered consecutively.

Examples of journal reference style:

1. Deppe H, Horch HH, Stemberger A, Henke J, Hillemanns M, Wagenpfeil S: Verbessern Wachstumsfaktoren an Titanfolien die Knochenqualität? *Z Zahnärztl Implantol* 2002;18: 197–204

2. Tetsch P, Tetsch J: Fortschritte der zahnärztlichen Implantologie. Köln, Deutscher Zahnärzterverlag 1996
3. Neukam FW, Buser D: Implantate bei unzureichendem Knochenangebot. In Koeck B, Wagner W (Hrsg): Implantologie. Praxis der Zahnheilkunde. München: Band 13, Urban & Schwarzenberg Verlag 1996, 177–218

Up to six authors should be listed in the list of references. If there are seven or even more authors named, please list the first three authors and write "et al."

Please write English headlines in small initial letters, except the first word at the beginning of a sentence and proper names.

6. Illustrations

6.1 General

In the Editorial Manager illustrations are also defined as an additional component of an original work, which is why they should be submitted online or uploaded as separate attachments from the manuscript.

Online submissions are preferred. If it is not possible to upload a file (file size, only reflective copy or slide), offline submission is also permitted; details about submission offline are described below. Submittals can only be returned if expressly wished.

6.2 Identification

Illustrations should be identified with the name of the author, numbered in sequence in the file description inserted in the continuous text of the manuscript as necessary information (abbreviated with Fig.). In the case of offline submission of reflective copies, the name of the author and title of the work should also be written on the back of the reflective copies.

6.3 Photographs/Diagrams

Diagrams and photographs should be submitted online as separate image files. When submitting, a high resolution of 300 dpi minimum and a minimum illustration width of 12 cm are essential!

Pixel photographs are best processed using Adobe Photoshop. Please ensure that you save the photographs in CMYK mode, do not use special colours (e.g. Pantone or HKS), do not include ICC profiles and if you save a photograph as EPS file in Photoshop, deactivate the option "Postscript Colour Management".

Diagrams and photographs are generally reduced to adapt them to the print area. With microscopic photographs, the scale should be given in the legend (e.g.: magnification 500:1) or drawn as a scale with information of sizes in the photograph.

The Editorial Manager accepts the following photograph formats: TIFF, GIF, JPEG, EPS, Postscript, PICT, BMP, PSD and WPG.

With offline submissions, slides or sharp, contrast-rich black-white and colour prints should be submitted in the format of approximately 9 cm x 13 cm and limited to displaying the important sections.

6.4 X-ray images

X-ray images should also be submitted as separate components from the manuscript, but also in exceptional cases offline.

A minimum resolution of 300 dpi is also required here for digital image files. In the case of offline submissions, negative copies (approximately 9 cm x 13 cm) should be submitted. They also only appear in print as a negative.

The aforementioned file formats for photographs & diagrams apply.

6.5 Graphs

As with all illustrations, graphs, i.e. line drawings, should also be submitted separately online and only offline in exceptional cases. A resolution of 1200 dpi with a minimum width of 12 cm is required with files and the use of graph programmes is recommended for producing vector graphs. Please convert your graph file after creation in a file format that can be further processed in the production. Preferred file formats are: .tif, .eps, .pdf und .jpeg. When submitting reflective copies offline line drawings should be drawn cleanly (b/w) and labelled adequately large.

7. Tables

Tables are also defined as an additional submission component for original works in Editorial Manager and should be uploaded as separate attachments. Tables should be numbered in sequence and inserted in the continuous text of the manuscript as necessary information (abbreviated with Tab.). They should be limited to the number required for understanding the work. Tables should not be highlighted in colour; emphasising with bold print, e.g. in the column headings should be avoided if possible. If illustrations are used in a table, these must also be submitted separately. The Editorial Manager also accepts XLS (MS Excel) as a further file format.

8. Legends

In the Editorial Manager legends are also submission components and should be uploaded as attachments separate from the manuscript. Legends should always be created if illustrations (photographs, diagrams, graphs) or tables are included in the manuscript. The same guidelines apply as for the manuscript regarding file formats, orthography, abbreviations and foreign words. Legends should be organised according the numbering of illustrations or tables. Legends should be drafted the same as the summary or keywords in German and English. The sources of the illustrations should also be given.

9. Online education

9.1 General

Since 2005 the Journal of Dental Implantology (ZZI) offers options for online further education, ****which you can carry out on the website www.online-zzi.de****. To constantly maintain this education option at the current level you can provide a valuable contribution for all dental specialists with new questions. We would therefore ask you to submit a few questions with your submission.

9.2 Further education questions

Online educational questions are defined as additional submission components, i.e. they must be uploaded online as separate attachments.

The same guidelines (file format, spelling etc.) apply as for manuscripts. Please include five questions each with four answer options (see example) as a separate submission component with your original work and give the correct answer.

Example:

Which of the following statements about early and immediate restoration in the edentulous jaw are incorrect?

- The placement of implants in the mandible and temporary immediate restoration is also possible without prior CT / CBCT planning.
- Prospective studies show a survival rate for immediately loaded implants in the mandible of > 95%.
- Transgingival implant placement frequently results in particularly favourable peri-implant mucosal conditions.
- Taking an intraoperative impression of implants is a practical procedure for implementing immediate and early restoration concepts.

Answer c is correct.

(Please ensure that only one of the four possible answers is correct.)

10. Additions to the author guidelines

10.1 Authorisations: General

Authorisations are defined as separate submission components, which – if relevant for publication – should be submitted online.

10.2 Authorisations: in particular: ethics commission, declaration of consent, authorship

The approval of the responsible ethics commission should be noted with clinical studies that are subject to authorisation. Sponsors of the study, in particular public subsidies and industrial support,

must always be given as clearly visible notes.

The approval of the competent authority must be given in the case of animal experiments. The author is responsible for obtaining the consent of the patient in the case of photographs (appropriate coverage of photographs of the face) or X-ray images. The number of authors is strictly limited to the scientists involved in creating the manuscript.

10.3 Granting of rights

With acceptance of the manuscript the Deutsche Ärzte-Verlag GmbH (German Medical Publishing Company) acquires the exclusive unlimited right in terms of time, space and content to fully utilise the copyright and related protective rights as defined in the German copyright law (UrhG). The granting of rights includes the authority of the publishing company to utilise the rights in Germany and abroad in physical and non-physical form and to reproduce the work publicly, in particular in print media, film, radio, internet, databases, telecommunication and data networks as well as on data carriers (e.g. CD-ROM, floppy disks and microfilms), and to make available for the general public for individual retrieval (downloading), for reproduction on the screen (PC, PDA etc.), for printing by the user as well as for translation in all languages (e.g. with English translation) and to utilise the translation in accordance with the granted rights of use. The rights also apply to the use by a third party under transfer of corresponding rights of use in Germany and abroad. No third parties in this meaning are affiliated companies pursuant to §§ 15 et seq. of the AktG (German Stock Corporation Act).

10.4 Conflict of interest

There is a conflict of interest if the activities of a person involved in the assessment and publication process (author, publisher, assessor) could influence the assessment in an improper way – even if such an influence does not occur. When submitting their manuscript, authors should declare all financial interests with a company whose products play an important part in the article or a compa-

ny that distributes a competing product. Even if there is no conflict of interest, it should be explicitly indicated. Naming of conflicts of interest should relate to the past five years. The author hereby agrees that the editors can publish the information regarding the conflict of interest.

10.5 Declaration regarding the independence of the authors

With their signature, the authors of the educational measures declare that they did not play any part in the content design of documents and commercial aspects (e.g. for the sales promotion of a specific product or preparation). All authors are named to the user(s), responsibility for contents not jointly compiled is specified.

10.6 Copyright

The inclusion in the bibliography and the written declaration of consent of the copyright owner (generally publisher, possibly also author, photographer or agency) is required with the reproduction of illustrations, images and tables from third-party media. In addition to print approval, you should request an original document with the corresponding publisher as an *.eps file or *.tif file for illustrations and as Word file or Excel file with tables. The author must provide proof of reprint permission. The author is liable to the publisher for all cases in which the publisher is claimed against by third parties due to infringing of privacy rights and/or copyright.

10.7 Granting and scope of the imprimatur

Imprimatur is granted to the editor when the authors return the galley proof and approval of the illustrations or graphs. The editors reserve the final decision in the case of contested formulations, unavoidable technical cutbacks during the layout and formulation of headings and abbreviated titles. The corresponding author guarantees the approval of all authors.

Authors who wish to publish an article for the headings original work, reviews and conference articles in the ZZI***

DZZ, must complete the two Word files („Rechtseinräumung_ZZI.doc“ und „Interessenkonflikt_ZZI.doc“ [“Granting of rights_ZZI.doc“ and “Conflict of interest_ZZI.doc”]) which are stored in the internet at www.online-zzi.de, when submitting their manuscript and send them to the following address:

Deutscher Ärzteverlag GmbH,
z. Hd. Frau Gabriele Schubert (ZZI)^{***},
Dieselstr. 2, 50859 Köln
Germany
(schubert@aerzterverlag.de;
Fax: 02234 7011-6241^{***}).

A separate declaration is required for each author.

The editorial staff and publisher would like to thank you for your interest in the ZZI^{***} and for your effort when submitting your manuscript.

If you are finding difficulty in progressing with your online submission or require assistance with other seemingly insurmountable problems, we would be happy to help with advice and support.

We look forward to successful cooperation!
